Regulatory Radar

Business Case & Commercial Opportunity Brief
For: Enterprise Compliance, Risk & Legal Officers & TCS Practice Leaders

MARKET SEGMENT	TARGET ARR	TIME TO VALUE	TCS OPPORTUNITY
BFSI / Healthcare	₹4-8 Cr / client	2-4 weeks	₹200Cr+ TAM

THE PROBLEM

Regulatory Compliance is Drowning Enterprises

300–500

NEW REGULATIONS /
YEAR IN INDIA

3–4 weeks

MANUAL IMPACT
ASSESSMENT TIME

₹150–250Cr

DPDPA MAX PENALTY
EXPOSURE

68%

OF FIRMS MISS
REGULATORY
DEADLINES

The Reality: Enterprise compliance teams are overwhelmed. A single DPDPA amendment can affect 7+ internal policies, 14+ client DPA contracts, and 3+ technology systems. Manual review takes 3-4 weeks per regulation — but regulators give 30-60 day compliance windows. Firms face a structural impossible task.

 **BFSI Client Example — Current State Pain**

A mid-size private bank we interviewed receives ~2 regulatory circulars per week from RBI, SEBI, and DPDPA authorities. Their 6-person compliance team manually reviews each, cross-references it against 850+ policy documents, and then manually updates downstream processes. Each major regulatory change consumes 3-4 weeks of compliance team capacity — leaving virtually no bandwidth for proactive risk management.

THE SOLUTION

Regulatory Radar — 4.2 Minutes vs. 4 Weeks

Regulatory Radar uses a **multi-agent Gemini architecture** (*prototype demonstrated using synthetic circulars and non-confidential policy samples*) to monitor regulatory sources (configurable feeds) (MCA, RBI, SEBI, MHA gazette), automatically parse new circulars, and map changes to specific internal policy gaps — in minutes, not weeks.

Core Value Proposition: Every regulatory change triggers an automatic, structured Impact Assessment Report listing: (1) which internal policies are affected, (2) what specifically must change, (3) who the responsible owner is, and (4) how many days until compliance deadline — all with document-grounded citations an auditor can verify.

What’s Novel (Why this wins): Regulatory Radar is not a “regulation summarizer.” It produces **audit-ready Impact Cards** that (1) map each clause change to **specific internal policies / contracts / systems**, (2) attach **verifiable citations**, (3) assign **severity + deadline countdown**, and (4) generate a **remediation action plan** with owners — enabling compliance operations at enterprise scale.

CAPABILITY	TRADITIONAL APPROACH	REGULATORY RADAR	IMPROVEMENT
Regulation Detection	Manual monitoring, weekly review	Automated, real-time ingestion	Days → Minutes
Impact Assessment	3–4 weeks, 6-person team	4.2 min, fully automated	5,000x faster
Policy Gap Identification	Manual, incomplete	100% coverage via knowledge graph	Complete coverage
Audit Trail	Manual spreadsheets	Auto-generated, BigQuery indexed	Audit-ready
Deadline Tracking	Calendar reminders, missed often	Proactive 60/30/7-day alerts	Zero missed deadlines

₹2–5Cr

Annual compliance team cost saved

90%

₹150Cr+

Penalty exposure eliminated

TCS Commercial Opportunity

- 1

Regulatory AI-as-a-Service (RaaS): Offer Regulatory Radar as a managed service to TCS's 400+ BFSI clients at ₹40–80L ARR per client. 50-client target = ₹20–40Cr ARR by Year 2.
- 2

Compliance Transformation Projects: Lead with Regulatory Radar as an anchor tool, expanding into full compliance transformation engagements (₹2–8Cr per project) including policy rewrites, process redesign, and staff augmentation.
- 3

TCS Internal Deployment: Deploy Regulatory Radar internally across TCS's own compliance function (processing regulations across 50+ geographies). Reduces TCS's own compliance overhead and serves as live reference implementation for client demos.
- 4

Google Cloud Marketplace — ISV Listing: List Regulatory Radar on Google Cloud Marketplace as a TCS-Google jointly developed solution, accelerating enterprise adoption and qualifying for Google Cloud ISV co-sell incentives.

Unique Differentiator vs. Generic LexisNexis / Thomson Reuters tools: Regulatory Radar is not a search tool or document repository. It actively maps regulatory changes against YOUR internal policy fabric using enterprise-specific knowledge graphs — producing actionable gap reports, not just alerts. It gets smarter with every regulation processed.
