Silent Escalation Predictor

Business Case & Commercial Opportunity Brief

For: CX Leaders, Customer Success VPs & TCS BFSI / SaaS Practice

MARKET SEGMENT	DETECTION ADVANTAGE	AVG SAVE RATE	TCS OPPORTUNITY
Enterprise SaaS / BFSI	30-60 days early	54% high-touch	₹150Cr+ TAM

THE PROBLEM

Silent Churn is the Invisible Revenue Killer

67%

OF CHURN HAPPENS SILENTLY

5-7x

COST: ACQUIRE VS. RETAIN

₹42L

AVG ENTERPRISE CUSTOMER ACV

30 days

TOO LATE FOR NPS-BASED ALERTS

The Reality: 67% of enterprise customers who churn never complain. They simply stop engaging — logging in less, opening fewer emails, submitting fewer tickets. By the time most CRM tools flag them as "at risk," it's too late: the decision to leave was made weeks or months ago. Traditional NPS surveys only capture the 33% who complain.

 The Detection Window Problem

A typical B2B SaaS company detects churn risk 1-2 weeks before contract renewal — when the customer has already made their decision. The Silent Escalation Predictor extends the detection window to **30-60 days** by fusing behavioral signals that begin changing months before overt signs appear. At 30-60 days lead time, success teams have enough runway to intervene, build value, and convert renewal decisions.

THE SOLUTION

4-Channel Behavioral Fusion — Not Just Product Usage

Most churn prediction tools only look at product usage data. The Silent Escalation Predictor fuses **4 behavioral channels** via the Gemini-powered **SRS (Silent Risk Score)** Engine:

Channel	What it Measures	Key Signals	Weight
 Usage	Platform engagement decline	Login frequency, session depth, feature adoption velocity	30%
 Communication	Response silence	Email open rate, response latency, survey non-response	25%
 Support	Support disengagement	Ticket absence, CSAT drop, escalation history	20%
 Transactions	Financial health signals	Payment latency, plan downgrade requests, add-on cancellations	25%

Intervention Tiers (SRS 0-100):  Low (0-40) → automated email + nurture,  Medium (41-70) → CSM outreach + priority support,  High (71-100) → manager escalation + retention strategy.

Explainability: Unlike black-box ML churn models, every SRS score is fully explainable — account managers see exactly which channels contributed, which signals triggered the risk flag, and receive a Gemini-generated personalized intervention script right in the alert. No "black box" concerns for regulated industries like BFSI and Healthcare.

TCS Commercial Opportunity

- 1

Churn Intelligence as a Service (ClaaS): License Silent Escalation Predictor to TCS's enterprise SaaS and BFSI clients as a managed retention intelligence service. ₹30–60L ARR per client. Target 50 clients = ₹15–30Cr ARR by Year 2.
- 2

Customer Success Transformation: Anchor a full CS transformation engagement — retooling client's CSM team workflows, intervention playbooks, and success metrics around the SRS engine. ₹1–4Cr per engagement.
- 3

TCS Internal Deployment: Deploy for TCS's own enterprise client portfolio management. Identify at-risk TCS service contracts early, enabling relationship managers to proactively engage before renewal negotiations deteriorate.
- 4

Vertex AI + Gemini Showcase: Positions TCS as a leading Google Cloud ISV using Vertex AI and Gemini for customer intelligence — qualifying for Google co-sell programs and Marketplace listing, amplifying reach to Google's 3,000+ enterprise clients.

Differentiation vs. Gainsight / ChurnZero: Existing tools require manual CSM data entry and focus on product usage only. Silent Escalation Predictor is fully automated, cross-channel, and delivers AI-generated intervention scripts — not just risk scores. It integrates with existing CRM via Vertex AI Data Connectors, requiring zero workflow change for CSM teams.
